OPEN SOURCE

ADR template with Docusaurus

SKILLS

Architecture
Microfrontends (Module Federation), microservices, REST APIs, SSO with OIDC

Cloud and operations
Google Cloud (Cloud Run, Cloud SQL, Storage), Docker, CI/CD, observability, cost control

Development
.NET (C#), Python, TypeScript, Angular, Vue, Nuxt, Node.js, NestJS, Ionic, Flutter

Data
PostgreSQL, SQL Server, MongoDB, Redis, BigQuery, Dataform, Power BI

Applied AI
Vertex AI and Gemini, tool-using agents on language models, RAG with embeddings, per-user memory, telemetry and per-query cost control

Leadership
Technical leadership, mentoring, code review, documentation and ADRs, Scrum and Kanban

EDUCATION

Information Security Management
Universidad ESAN *2024*

Computer Systems Engineering
Universidad Privada del Norte

Computing and IT
I.S.T.P. San Pedro del Valle de Mala · technical degree *2015 – 2017*

Web development
Platzi *2019*

LANGUAGES

Spanish — native
English — basic, actively learning

PROFILE

Lead Full Stack Developer building and running enterprise platforms since 2016. I lead the architecture and development of a modular corporate suite with centralized authentication, automated deployments, an in-house Design System and an AI layer in production.

ACHIEVEMENTS

- Modular architecture with Module Federation and a versioned Design System: each team deploys its module without blocking the others.
- Automated deployments with federated identity (Workload Identity Federation): zero service account keys stored in repositories.
- Cloud cost governance: found a duplicated environment that made up 84% of a monthly bill, and applied retention policies to 66 GB of artifacts.
- BigQuery data lake: built the pilot that moved the transformations from Cloud Composer to Dataform, validated row by row against production with zero differences. The data team adopted it and an orchestration environment running 24/7 was shut down.
- Conversational assistant in production on the platform: it answers by calling tools against the source of truth instead of a data dump, with per-user memory and usage telemetry for management.
- Three external portals (customers, suppliers and students), each with its own identity realm and the backend as the boundary: a third party's token never enters the internal network.

EXPERIENCE

Lead Full Stack Developer

CELSA — Conductores Eléctricos Lima · Lima *06/2026 – Present*

- Architecture and development of the corporate suite: SSO, CI/CD and a Design System shared by more than ten independently deployed modules.
- SAP Business One integrations through a single gateway that centralizes credentials and keeps each module from querying the ERP directly.
- Platform governance: cloud costs, repository access with mandatory review, production alerts and decisions documented as ADRs.
- Data platform (bronze, silver and gold layers on BigQuery): cost, access and dependency audit, and caught in time a data load whose removal would have silently frozen copper costing.
- AI governance: what each agent can do and say is defined by an allowlist of tools and versioned prompts, not in each module's code.

Partner · Tech Lead and Full Stack Developer

StudioXperto · Lima · freelance since 2020, company since 2021 *11/2020 – 05/2026*

Nuxt · Vue · React · Angular · Ionic — Node.js · .NET 10 · Laravel — MongoDB · MySQL · PostgreSQL · Redis — Google Cloud · DigitalOcean · Vercel · GitLab CI — Keycloak — Vertex AI · Gemini · Claude — n8n · WordPress — WhatsApp and Meta API

- Led a team of four with clients in Peru, Chile, Spain and the US, from requirements to support; full time from January to May 2026.
- Universidad Corporativa Intercorp: an AI course assistant demo (Semantic Kernel, .NET) that we presented to the client and the Aprendix migration from Lumen to Laravel as services on Cloud Run with Cloud SQL.
- Ferreyros (industrial sector): requirements gathered on visits to the technical and administrative areas, Google Cloud monitoring alerts and technical guides in Docusaurus.

- CentralWeb, our own product: multi-company CRM and marketing suite (WhatsApp Business, AI-assisted social media, bulk email and blog) used by about ten companies.
- AOA Chile: head of IT. Institutional website with news, magazine and TV, built in 25 days, and an industry directory with a map and AI-assisted lead capture.
- Machinery rental ERP with fleet and real-time GPS and an Android app; attendance with biometric and face-recognition clocks; offline teaching records for UGEL Padre Abad.
- RealtyPlus (Spain): WordPress websites and landing pages, servers and email configuration.
- Intelligent Punks (US): n8n workflows, bug fixing on WordPress sites and their workflows, and QA review.

Analyst Developer

Intelica Consulting · Miraflores *11/2024 – 12/2025*

- Coordinated QA, development and business teams: planning, assignment and follow-up, meeting 100% of critical deadlines.
- AI assistant prototype (Semantic Kernel on Azure OpenAI): per-user sessions, direct database queries and functions that generate Excel and PDF files. I presented it and ran its follow-up.
- Technical mentoring and support for junior developers, and Power BI KPI dashboards that the business areas use to make decisions.

Systems Analyst

BSF Almacenes del Perú · Punta Hermosa *11/2023 – 10/2024*

- Access control system (SCA) in Chile and Peru: improvements and support, the gatehouse system in Python, deployments with Jenkins and over SSH, and user documentation.
- Migrated tables with more than 7 million records from a legacy system to the new one using scheduled jobs, brought the customer platforms into a single portal (.NET Core), and built batch processes with Energy Cloud and SAP.
- Mobile: maintenance of a Xamarin (.NET) app, and MVPs for GPS vehicle tracking and equipment inventory with incident logging.

Full Stack Developer

inLearning / IDAT · Cercado de Lima *09/2022 – 10/2023*

- Evolved the EVA learning portal with Vue 3, .NET Core and SQL Server, and wrote the technical manuals that kept it maintainable after I left.

Full Stack Developer · contracts

Ibrevis, Plustech, Grupo Rojas, Madison Perú and Acceso Corp · Lima *01/2019 – 10/2020*

- Ibrevis: cash and registration modules for Zappyn, a trade fair management platform, and the first prototype of its web floor plan in Fabric.js, in the team that signed with StartUp Perú. Today Zappyn sells fair management and the floor plan as a product.
- Plustech: Angular frontend and Java backend, and, as a vendor, the frontend of a system for EsSalud.
- Grupo Rojas: HR control, task and project modules with Gantt charts (Node.js, Vuetify and Cloud Storage).
- Madison Perú: support and frontend for each area, and IT while the role was filled: servers, Active Directory and email backups.
- Acceso Corp (automotive sector): development and documentation on an in-house framework with the logic in PostgreSQL.

Intern → Junior Programmer Analyst → ERP Vendor

Sursa Gas · Chilca *08/2016 – 12/2024*

- Joined to improve the spreadsheets the company ran on and, on my own initiative, started its sales system in Access VBA with MySQL.
- It grew into its ERP, with response times 70% faster. When my contract ended in 2018, I stayed on as a vendor until 2024, with a small team, on sales, cash and production. It stayed in use until the company closed in 2025.
