SKILLS

Architecture
Microfrontends (Module Federation), microservices, REST APIs, SSO with OIDC

Cloud and operations
Google Cloud (Cloud Run, Cloud SQL, Storage), Docker, CI/CD, observability, cost control

Development
.NET (C#), Python, TypeScript, Angular, Vue, Nuxt, Node.js, NestJS, Ionic, Flutter

Data
PostgreSQL, SQL Server, MongoDB, Redis, BigQuery, Dataform, Power BI

Applied AI
Vertex AI and Gemini, tool-using agents on language models, RAG with embeddings, per-user memory, telemetry and per-query cost control

Leadership
Technical leadership, mentoring, code review, documentation and ADRs, Scrum and Kanban

EDUCATION

Information Security Management
Universidad ESAN *2024*

Computer Systems Engineering
Universidad Privada del Norte
not completed

Computing and IT
I.S.T.P. San Pedro del Valle de Mala · technical degree *2015 – 2017*

Web development
Platzi *2019*

LANGUAGES

Spanish — native
English — basic, actively learning

PROFILE

I take platforms end to end: from gathering requirements with the business to running them in production. I work across architecture, code and coordination with teams and vendors, bring AI to production with clear rules and costs under control, and document everything so the system keeps running without me.

ACHIEVEMENTS

- Corporate suite with keyless deployments (Workload Identity Federation) and a Design System used by 17 applications.
- Cloud costs: found a duplicated environment that was 84% of a monthly bill and applied retention to 66 GB of artifacts.
- Zappyn trade fair floor plan: from a prototype that failed in 2019 to a product sold today, with routes, booth booking and an AI assistant.
- CentralWeb: StudioXperto's CRM and marketing suite, used by about ten companies.
- BSF: migrated tables with more than 7 million records and brought the customers' platforms into a single portal.
- Sursa Gas: a sales system in Access that grew into its ERP (sales, cash and production) and ran for 8 years, until the company closed.

EXPERIENCE

Lead Full Stack Developer

CELSA — Conductores Eléctricos Lima · Lima *06/2026 – Present*

- Corporate suite architecture: microfrontends with Module Federation, SSO, CI/CD and a shared Design System, plus three external portals (customers, suppliers and technicians), each with its own identity realm.
- SAP Business One integrations through a single gateway that centralizes credentials and keeps each module from querying the ERP directly.
- Platform governance: cloud costs, repository access with mandatory review, production alerts and decisions documented as ADRs.
- BigQuery data platform (bronze, silver and gold): moved the transformations from Cloud Composer to Dataform, validated row by row, and caught in time a data load whose removal would have frozen copper costing.
- AI in production: an assistant that answers by calling tools against the source of truth, with per-user memory; what each agent can do is defined by an allowlist of tools and versioned prompts.
- Automations with an owner in a systems directory, and an AI agent that picks up tasks from the board and opens pull requests.

Partner · Tech Lead and Full Stack Developer

StudioXperto · Lima · freelance since 2020, company since 2021 *11/2020 – 05/2026*

Nuxt · Vue · React · Angular · Ionic — Node.js · .NET 10 · Laravel — MongoDB · MySQL · PostgreSQL · Redis — Google Cloud · DigitalOcean · Vercel · GitLab CI — Keycloak — Vertex AI · Gemini · Claude — n8n · WordPress — WhatsApp and Meta API

- Led a small team with clients in Peru, Chile, Spain and the US, from requirements to support; full time from January to May 2026.
- Universidad Corporativa Intercorp, two projects: migrating the Aprendix platform from Lumen to Laravel as shared services on Cloud Run and Cloud SQL, and an AI agent for its courses (Semantic Kernel, .NET).
- Ferreyros (industrial sector), through Verdandi: gathered requirements at their offices with the technical and administrative areas, wrote the developers' tasks, PostgreSQL queries and reports, Google Cloud alerts and guides in Docusaurus.

- CentralWeb, StudioXperto's own product used by about ten companies: CRM with quotes, bulk WhatsApp and email, a WhatsApp inbox, web visit metrics, blog and AI social posts.
- AOA Chile: head of IT. Institutional website with news, magazine and TV, built in 25 days, and an industry directory with a map and AI-assisted lead capture.
- Montacargas y Grúas Marco: their website (montacargasygruasmarco.com) and a machinery rental ERP: fleet with real-time GPS, maintenance, warehouse, purchasing, sales, cash and HR, with an Android app.
- El Marati: their website (elmarati.com) and an attendance system with biometric and face-recognition clocks, vacations, payments and reports.
- UGEL Padre Abad: website and app for teaching records that work offline.
- RealtyPlus (Spain): WordPress sites and landing pages, servers and email.
- Intelligent Punks (US): n8n workflows, WordPress bug fixing and QA review.

Analyst Developer

Intelica Consulting · Miraflores *11/2024 – 12/2025*

- Coordinated QA, development and business teams: planning, assignment and follow-up, meeting 100% of critical deadlines.
- AI assistant prototype (Semantic Kernel on Azure OpenAI): per-user sessions, direct database queries and Excel/PDF generation; I presented it and followed it up.
- Technical mentoring for juniors: support on their tasks and tracking their progress.
- KPI dashboards in Power BI that the business areas use to make their decisions.

Systems Analyst

BSF Almacenes del Perú · Punta Hermosa *11/2023 – 10/2024*

- Access control system (SCA) in Chile and Peru: improvements and support, the gatehouse system in Python, deployments with Jenkins and SSH, and user docs.
- Migrated tables with more than 7 million records from a legacy system to the new one using scheduled jobs, brought the customer platforms into a single portal (.NET Core), and built batch processes with Energy Cloud and SAP.
- Mobile: maintenance of a Xamarin (.NET) app, and MVPs for GPS vehicle tracking and equipment inventory with incident logging.
- Coordinated and tracked external vendors and their projects, including the Flutter apps.

Full Stack Developer

inLearning / IDAT · Cercado de Lima *09/2022 – 10/2023*

- Full stack development of the EVA learning portal in .NET Core and Vue 3, with SQL Server, and the technical manuals that let the team maintain it after I left.
- Worked with the tech lead and the team, in Scrum.

Full Stack Developer · contracts

Ibrevis, Plustech, Grupo Rojas, Madison Perú and Acceso Corp · Lima *01/2019 – 10/2020*

- Ibrevis: cash and registration modules for Zappyn, a trade fair management platform, and the first prototype of its web floor plan in Fabric.js, in the team that signed with StartUp Perú. Today Zappyn sells fair management and the floor plan as a product.
- Plustech: Angular frontend and Java backend, and, as a vendor, the frontend of a system for EsSalud.
- Grupo Rojas: HR, tasks and projects with Gantt charts (Node.js, Vuetify, Cloud Storage).
- Madison Perú (marketing agency): frontend development in Vue and Vuetify for the company's modules and systems. In IT: Microsoft accounts and Active Directory, IT support and resolving requests from the business areas.
- Acceso Corp (automotive), junior developer: modules such as collections on an in-house low-code framework that generated the UI from PostgreSQL stored procedures; module maintenance and user manuals.

Intern → Junior Programmer Analyst → ERP Vendor

Sursa Gas · Chilca *08/2016 – 12/2024*

- Joined to improve the spreadsheets the company ran on and, on my own initiative, started its sales system in Access VBA with MySQL.
- It grew into its ERP (sales, cash and production), 70% faster. I stayed on as a vendor until 2024, with a small team; it ran until the company closed in 2025.
